REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The independent claim identifies the uniquely distinct feature of a portable container wall comprises a non-porous membrane made of a polymeric material comprising hydrophilic units, and the container produces a cooling effect capable of maintaining the temperature of a beverage below ambient. The closest prior art, Nomi (USPN 4,368,766) teaches a container that produces a cooling effect capable of maintaining the temperature of a beverage below ambient, but fails to teach the wall of the container comprises hydrophilic units and having the ability to transmit water vapor by a solution/diffusion mechanism. Johnson et al (MDDI article) teaches a film comprising hydrophilic units that has the ability to transmit water vapor by a solution/diffusion mechanism. However, there is no motivation to combine the references as explained by the applicant in his remarks filed September 19, 2007. Furthermore, the Declaration filed September 19, 2007 provides unexpected results for the use of Applicant's non-porous membrane over the microporous material of Nomi in which both materials were effective in producing a cooling effect for the water contained, but the microporous container had substantially more water loss when producing the cooling effect.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
